

## Item Name: Human Adult Retina Whole Tissue Lysate

**Cat#** HAL-1374

**Size:** 100 ug

**Tissue type** Retina

**Source** Human

**Buffer:** Laemmli SDS-PAGE sample buffer (reduced containing 10mM DTT)

**Store** Total tissue protein lysate was prepared in Hepes buffer, pH 7.9, KCl, dexoycholate, NP-40%, EDTA, sucrose, and a cocktail of protease inhibitors. Protein was optimized and then it is mixed with 2X SDS-PAGE Laemmli sample buffer (reduced). Lysate is typically supplied at a concentration of 2 mg/ml (or see lot specific cocon on the vial).. Store at 2-8°C for short term use. For extended storage, freeze working aliquots at -70°C. Repeated freezing and thawing is not recommended. Under proper storage conditions the shelf life is half a year from the date of receipt.

### Recommended Usage

Western blot-Load 5-20 ug/lane for testing with various antibodies. Heat at 95oC for 2-5 minutes prior to loading on gels.

### Lysate preparation

Tissue lysate was prepared by homogenization in modified RIPA buffer (150 mM sodium chloride, 50 mM Tris-HCl, pH 7.4, 1 mM ethylenediaminetetraacetic acid, 1 mM phenylmethylsulfonyl fluoride, 1% Triton X-100, 1% sodium deoxycholic acid, 0.1% sodium dodecylsulfate, 5 µg/ml of aprotinin, 5 µg/ml of leupeptin. Tissue and cell debris was removed by centrifugation. Protein concentration was determined with Bio-Rad protein assay. The product was boiled for 5 min in 1 x SDS sample buffer (50 mM Tris-HCl pH 6.8, 12.5% glycerol, 1% sodium dodecylsulfate, 0.01% bromophenol blue) containing 10mM DTT.

All items are for in vitro research use only.
