

Item Name MCF7 Cell Slide

Cat# HCLS-17012

Size: 1 package of 5 slides

Cell Lines (69 yrs, Female) mammary gland, breast, epithelial adenocarcinoma

Source Human

Buffer: In order to keep the antigens in their native forms, cells were fixed in 4% paraformaldehyde.

Store Can be stored for up to 3 months at 4°C under desiccated conditions.

	<p>Recommended Usage</p> <p>This product is provided for immunocytochemical analysis of protein and protein-protein interaction.</p> <p>Cell Slide preparation</p> <p>Human MCF7 cells were cultured in Ham's F12K medium and harvested at the log phase of growth. The MCF7 cells were fixed in 4% paraformaldehyde and arrayed on a 12-well (5 mm) adhesive coated slide, with each well's surface specifically treated to enhance cellular attachment and to minimize background staining. Each well was loaded with approximately 7.5×10^3 MCF7 cells. A follow-up heat dehydration process was done to ensure the attachment of MCF7 cells and the stability of cellular proteins.</p> <p>All items are for in vitro research use only</p>
