

Product Specification Sheet

BSA conjugated FLAG tag control protein

□ **Cat. FLAG21-C**

BSA conjugated FLAG tag control for Western blotting and ELISA

SIZE: 100 ug

Recombinant DNA technology allows the addition of short pieces of well-defined tags, "peptides" or proteins at the amino or c-terminus of target genes, which can provide 'affinity handles' designed to bind specific matrices. Therefore, tags enables a selective identification and purification of the protein of interest. Some common fusion tags include: Flag, GST, His, Omni, HA, MBP, C-myc, and GFP. FLAG-tag (DYKDDDDK) can be used in assays that require recognition when there is no antibody available to the given protein.

Recommended usage: This protein is suitable for uses such as an ELISA coating antigen or standard, immunogen, or as a Western blot control.

Western blotting: Load 10-100 ng total protein for good visibility with appropriate FLAG-tag antibodies

ELISA: Assay dependent concentration

Storage

Short-term: 4°C for 1 month

Long-term: at -20°C or below in suitable aliquots. Do not freeze/thaw or store working, diluted solutions.

SDS-PAGE analysis of FLAG-tag BSA conjugate

M: Ladder

Lane 1: 1.5 ug of conjugate
