H1N1-01-R-10

Recombinant Purified Hemagglutinin-Influenza A Virus H1N1 H1 (H1N1) (A/New Caledonia/20/99) protein

Size: 10 ug

Influenza A (H1N1) virus is a subtype of influenza A virus and was the most common cause of human influenza (flu) in 2009. Some strains of H1N1 are endemic in humans and cause a small fraction of all influenza-like illness and a small fraction of all seasonal influenza. H1N1 strains caused a few percent of all human flu infections in 2004–2005. Other strains of H1N1 are endemic in pigs (swine influenza) and in birds (avian influenza). In June 2009, the World Health Organization declared the new strain of swine-origin H1N1 as a pandemic. This strain is often called swine flu by the public media. Swine influenza (also called swine flu, or pig flu) is an infection by any one of several types of swine influenza virus. Swine influenza virus (SIV) is any strain of the influenza family of viruses that is endemic in pigs. As of 2009, the known SIV strains include influenza C and the subtypes of influenza A known as H1N1, H1N2, H3N1, H3N2, and H2N3.

The Influenza A Virus is a globular particle about 100nm in diameter, sheathed in a lipid bilayer derived from the plasma membrane of its host. Studded in the lipid bilayer are two integral membrane proteins some 500 molecules of hemagglutinin ("H") and some 100 molecules of neuraminidase ("N"). Within the lipid bilayer are 3000 molecules of matrix protein and 8 pieces of RNA. Each of the 8 RNA molecules is associated with many copies of a nucleoprotein, several molecules of the three subunits of its RNA polymerase some "non-structural" protein molecules of uncertain function.

Source: Recombinant Full-Length H1N1 A/New Caledonia/20/99 (gene accession # AAP34324) is purified (>95%, mol wt ~75 kda) from 293 cell culture infected with H1N1 A/New Caledonia/20/99. H1N1 New Caledonia shows 90% similarity to the A/PR/8/34 amino acid sequence. It is supplied in PBS containing 0.1% BSA and 25% glycerol. Store at 4oC. Do not freeze. It is stable for at least 1 year. it is supplied as sterile filtered colorless solution.

Application and Suggested Dilutions: ELISA and Western. Users must optimize the appropriate concentration and conditions for each assay.

This item is for LABORATORY ESEARCH USE ONLY.
