

Product Specification Sheet

Hemagglutinins H5 Influenza A Virus (H5N1) (A/chicken/India/NIV33487/2006) Protein and Antibodies

Cat. # H5N11-S **Rabbit** Anti-Hemagglutinins H5 Influenza A (H5N1) (A/chicken/India/NIV33487/2006) antiserum
SIZE: 100 ul

Cat. # H1N1-01-C **Recombinant** Hemagglutinin Hemagglutinins H5 Influenza A Virus (H5N1)
(A/chicken/India/NIV33487/2006) protein control or WB **SIZE:** 100 ul

Influenza A (H1N1) virus is a subtype of influenza A virus and was the most common cause of human influenza (flu) in 2009. Some strains of H1N1 are endemic in humans and cause a small fraction of all influenza-like illness and a small fraction of all seasonal influenza. H1N1 strains caused a few percent of all human flu infections in 2004–2005. Other strains of H1N1 are endemic in pigs (swine influenza) and in birds (avian influenza). In June 2009, the World Health Organization declared the new strain of swine-origin H1N1 as a pandemic. This strain is often called swine flu by the public media. Swine influenza (also called swine flu, or pig flu) is an infection by any one of several types of swine influenza virus. Swine influenza virus (SIV) is any strain of the influenza family of viruses that is endemic in pigs. As of 2009, the known SIV strains include influenza C and the subtypes of influenza A known as H1N1, H1N2, H3N1, H3N2, and H2N3.

The Influenza A Virus is a globular particle about 100nm in diameter, sheathed in a lipid bilayer derived from the plasma membrane of its host. Studded in the lipid bilayer are two integral membrane proteins some 500 molecules of hemagglutinin ("H") and some 100 molecules of neuraminidase ("N"). Within the lipid bilayer are 3000 molecules of matrix protein and 8 pieces of RNA. Each of the 8 RNA molecules is associated with many copies of a nucleoprotein, several molecules of the three subunits of its RNA polymerase some "non-structural" protein molecules of uncertain function.

Source of Antigen and Antibodies

Antigen	Recombinant Full-Length hemeagglutinin H1 proteins from mammalian and avian viruses
Ab Host/type	Rabbit, Polyclonal IgG # H5N11-S
2-Ab	Cat # 20320, goat anti-rabbit IgG-HRP (AP, biotin, FITC conjugates also available).
-ve control IgG	Cat # 20009-1, Rabbit (non-immune) Serum IgG, purified, suitable for ELISA, Western, IHC as -ve control

Hemagglutinin-Influenza A Virus H5N1 H5 (H5N1) (A/chicken/India/NIV33487/2006) (17-531aa), his tag was expressed in E. coli and purified using proprietary methods (>95%). For WB (**cat # H5N11-C**) is supplied in denaturing SDS-PAGE sample buffer ready to load on gels. Store at -20oC. Heat at 95oC for 2-3 min prior to loading on gels (10 ul/lane). SDS may crystallize in cold conditions. It should redissolve by warming before taking it from the stock. It should be heated once prior to loading on gels. If the product has been stored for several weeks, then it may be preferable to add 5 ul of fresh 2x sample buffer per 10 ul of the

#H5N11-C solution prior to heating and loading on gels. This preparation is not biologically active. It is not suitable for ELISA or other applications where native protein is required. This preparation is intended for qualitative purpose and not to serve as standard of known concentration. Do not freeze, thaw, or heat repeatedly.

Form & Storage of Antibodies/Peptide Control

Affinity pure IgG

100 ug/100ul solution lyophilized powder
Reconstitute powder in PBS at 1mg/ml

Storage

Short-term: unopened, undiluted liquid vials at -20oC and powder at 4oC or -20oC..

Long-term: at -20C or below in suitable aliquots after reconstitution. Do not freeze and thaw and store working, diluted solutions.

Stability: 6-12 months at -20oC or below.

Recommended Usage

Western Blotting (1:500-1:2000 antibody using ECL technique). Recombinant protein control ~75 Kda.

ELISA: Control protein can be used to coat ELISA plates at 1 ug/ml and detected with antibodies (1:1K-1.5K).

Histochemistry & Immunofluorescence: Not tested.

Specificity & Cross-reactivity

Rabbit Antibodies react with Hemagglutinins H5from Influenza A Virus from mammalian and Avian strains from different period of history. Recombinant HA5 proteins from several strains are available for controls studies.
