ALPHA DIAGNOSTIC INTERNATIONAL

Item Name A-20 Cell Slide

Cat# MCLS-17208

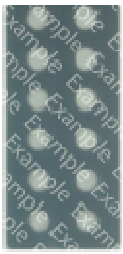

Size: 1 package of 5 slides

Cell Lines BALB/cAnN mouse, B lymphocyte, reticulum cell sarcoma

Source Mouse

Buffer: In order to keep the antigens in their native forms, cells were fixed in 4% paraformaldehyde.

Store Can be stored for up to 3 months at 4℃ under desiccate conditions.

Recommended Usage

This product is provided for immunocytochemical analysis of protein and protein-protein interaction.

Cell Slide preparation

Mouse A-20 cells were cultured in RPMI 1640 medium with 2 mM L-glutamine and harvested at the log phase of growth. The A-20 cells were fixed in 4% paraformaldehyde and arrayed on a 12-well (5 mm) adhesive coated slide, with each well's surface specifically treated to enhance cellular attachment and to minimize background staining. Each well was loaded with approximately 7.5 x 103 A-20 cells. A follow-up heat dehydration process was done to ensure the attachment of A-20 cells and the stability of cellular proteins.

All items are for in vitro research use only
